

QUICK START GUIDE

From download to your first coding change

Everything a new user needs, step by step. Version 1.2 · esysmax.com

1. What you need

- A Windows 10 or 11 PC (64-bit) with internet at least once a week.
- BMW E-Sys with PSdZData, installed on that PC (not included with E-Sys MAX).
- An ENET cable to the car, and a battery charger connected to the car while you code.

2. Install

1. Download the installer from **esysmax.com/download** and run it. The installer shows the Terms; accept them to continue.
2. Open **E-Sys MAX** from the Start menu. The first time, read the short "Terms and safety" summary and accept it.
3. The launcher lists the E-Sys versions it found on your PC.

3. Try it free for 3 days

1. In the launcher open **Help > Enter licence** and press **Start the free 3-day trial**. No card needed.
2. The launcher shows an orange **FREE TRIAL** badge with the days left.
3. The trial works on **one car**: the first car you connect becomes the trial car.

4. Buy a licence (2 minutes)

1. In the launcher open **Help > Enter licence** and press **Buy by card**. Your browser opens esysmax.com/buy with your PC ID already filled in.
2. Choose **1 month (\$39)**, **1 year (\$59)** or **Lifetime (\$99)**, tick the three boxes and press **Pay by card**. Payment is handled securely by Stripe. Every licence is a one-time payment; nothing renews by itself.
3. Right after paying, the page shows your licence. Press **Copy licence**.
4. Back in the launcher: **Help > Enter licence**, paste it, press **Activate**. Done.

Prefer Telegram? Press **Get a licence on Telegram** instead: @EsysMaxbot takes your order there. A licence you get in Telegram **arrives by itself**: just restart E-Sys MAX or press **Refresh** (top right). Nothing to copy.

5. Your first session

1. Connect the charger and the ENET cable. Press play on your E-Sys version in the launcher: E-Sys opens with E-Sys MAX inside.
2. Connect to the car in E-Sys, then make a **full backup** first: **E-Sys MAX > Full backup of the car**.
3. Read the coding data and open a module in the FDL-Editor. The E-Sys MAX panel shows every setting in English and **What can I code?** lists ready-made changes for your car.
4. Check every change before you code it. When in doubt, don't.

6. Useful tools

- **Search the car:** find any setting in every module by name.
- **Coding history:** see exactly what changed, and open an older version to put it back.
- **Fault scan:** read and clear the fault memory of every module.
- **Car report (PDF):** model, options, modules, changes and faults in one document.

7. Your licence

- One licence works on one PC. A Windows reinstall, new SSD or more RAM keep it.
- E-Sys MAX checks the licence online at least every 7 days and works offline in between.
- New laptop? A lifetime licence moves with you: in the launcher on the new PC, **Help > Enter licence > Get a licence on Telegram > Move my licence to this PC**. A 1-month or 1-year licence stays on the PC it was bought for.
- Lost your licence text after a reinstall? Use **esysmax.com/licence** with your order e-mail and PC ID.

8. Safety and legal

Vehicle coding is at your own risk: it can damage control units, change safety systems and make a car illegal to drive. Back up first, keep a charger connected, and only code changes that are legal where the car is used. E-Sys MAX is not affiliated with BMW AG. Full Terms, Privacy and Refund policies: **esysmax.com/terms, /privacy, /refunds**.

Help

Telegram: **@EsysMaxbot**. For a problem, press **Help > Make a problem report** in the launcher and send the zip.
